PROFESSIONAL SUMMARY

Cybersecurity graduate with hands-on penetration testing and vulnerability research experience earned through coordinated disclosure engagements with global enterprises — including Air France-KLM, Bose, and IHK München — via HackerOne and Zerocopter, alongside two cybersecurity internships applying OWASP Top 10 methodology, protocol-layer traffic analysis, and Python-based security automation. Skilled in web application security, cloud identity security (Azure, AWS), IAM/SSO attack surfaces, and building custom tooling for log analysis and digital forensics. Google Cybersecurity Professional Certificate holder. Seeking a Security Analyst or Junior Penetration Tester role to apply proven vulnerability discovery, responsible disclosure, and reporting skills within a SOC or offensive security team.

SECURITY RESEARCH & VULNERABILITY DISCLOSURES

Independent Security Researcher

Jul. 2026

Air France-KLM (Zerocopter CVD)

Remote

Identity & Access Management Security

- Identified a default-credential misconfiguration on a public-facing enterprise IAM server (Keycloak v12.0.3) enabling unauthorized administrative access to a production platform; responsibly disclosed to the vendor and verified as Critical severity.
- Identified an exposed OIDC client secret in the corporate PingFederate FedHub SSO system enabling cross-system authentication bypass potential; reported the misconfiguration with a proof-of-concept for remediation.
- Identified an information-disclosure flaw in Keycloak client redirect URI configurations exposing internal network topology details; reported for remediation.

Independent Security Researcher

Jun. 2026

IHK München (VDP)

Remote

Cloud & Identity Security (Azure)

- Discovered an authentication bypass in a Microsoft Teams integration utilizing Azure SignalR Service; demonstrated via a Python proof-of-concept that spoofing the x-ms-signalr-userid header could yield valid JWTs and authenticated WebSocket sessions as arbitrary users.
- Developed a Python Proof-of-Concept to automate the header injection and SignalR handshake; vulnerability was successfully reproduced and confirmed by the organization's security team.

Independent Security Researcher

Mar. 2026

Bose Corporation (HackerOne VDP)

Remote

Enterprise Security — Adobe AEM & SAP Hybris

- Identified an information-disclosure vulnerability in Adobe AEM Sling JSON selectors exposing internal configurations and metadata across 9 international locales; responsibly disclosed and listed on Bose's Security Hall of Fame.
- Analyzed Java stack traces to map the proprietary Spring Security filter chain and identify authentication mechanisms (OAuth2, Basic Auth), informing the scope of remediation recommendations.
- Discovered an access control bypass in the SAP Hybris ATP API where URI path manipulation (users/admin) forced unauthorized catalog context resolution without role validation; reported for remediation.

Independent Security Researcher

May 2026

NewCold (Zerocopter)

Remote

Web Application & API Security

- Identified an unauthenticated access flaw in WordPress REST API custom post endpoints exposing customer submissions containing PII; responsibly disclosed and awarded a bounty.
- Identified exposed Next.js Source Map files bypassing production minification; source-code analysis revealed undocumented API endpoints and improperly exposed cloud credentials, reported immediately for remediation.

PROFESSIONAL EXPERIENCE

Cybersecurity Intern

Jan. 2025 – Feb. 2025

IBM SkillsBuild (via Edunet Foundation)

Remote

- Engineered a Python-based security log parser (Apache/Nginx) using regex pattern matching to detect SQL injection and XSS attack signatures; generated visual threat dashboards via Matplotlib and structured JSON exports designed for SIEM pipeline integration.
- Applied threat modeling and incident response frameworks across network security, vulnerability management, and GRC domains; validated findings using OWASP ZAP in a controlled lab environment.

Cybersecurity Intern

Sep. 2025

Redynox (The Red Users)

Remote

- Performed protocol-layer traffic analysis using Wireshark to identify cleartext credential transmission over HTTP, anomalous DNS query patterns, and TCP session irregularities; documented findings as annotated PCAP reports.
- Applied OWASP Top 10 exploitation methodology in a controlled lab environment, mapping SQL injection, XSS, and CSRF attack chains end-to-end and documenting each with CVSS v3 severity ratings.

PROJECTS

Android Log Monitor

Nov. 2025 – Dec. 2025

Python, PyQt6, ADB | github.com/Priyansh5

- Built a cross-platform desktop application for real-time Android logcat monitoring with regex filtering, PID tracking, and timeline visualization.
- Implemented multi-threaded log processing using PyQt6 for efficient parsing and display of verbose logcat streams.
- Designed a GUI with advanced filtering capabilities, session statistics dashboard, and profile management for mobile forensic analysis.

CyberShield Toolkit

Jan. 2025 – Jun. 2025

Python, Scapy, SSL/TLS | github.com/Priyansh5

- Developed a cybersecurity toolkit with 4 modules for subdomain enumeration, network scanning, SSL/TLS auditing, and password analysis.
- Automated the reconnaissance workflow using Scapy for network discovery and SSL certificate validation.
- Implemented a multi-threaded password cracking module for ZIP/PDF files with dictionary and brute-force attack modes.

Log Analyzer

Nov. 2024 – Jan. 2025

Python, Matplotlib, Regex | github.com/Priyansh5

- Engineered a security log parser supporting Apache Common and Nginx formats using optimized regex patterns.
- Built a threat detection engine using pattern matching to identify SQL injection and XSS attempts.
- Generated visual dashboards with Matplotlib and JSON exports for potential SIEM integration.

EDUCATION

Bachelor of Technology in Computer Science Engineering

2022 – 2025

Teerthanker Mahaveer University

Moradabad, UP

Diploma in Electrical and Electronics Engineering

2019 – 2022

Teerthanker Mahaveer University

Moradabad, UP

CERTIFICATIONS

Google Cybersecurity Professional Certificate

Completed Aug. 2025

Coursera

Cybersecurity & Ethical Hacking Bootcamp

Aug. 2024

LetsUpgrade (NSDC)

The Tech Unique Cybersecurity Professional

Jul. 2025

The Tech Unique Academy

TECHNICAL SKILLS

Languages: Python, Bash

Security Tools: Burp Suite, Nmap, Wireshark, Metasploit, OWASP ZAP, Scapy

Platforms: Linux/Kali Linux, Windows

Security Domains: Web Application Security, Vulnerability Assessment & Penetration Testing (VAPT), Fuzzing, Network Security, OSINT, Log Analysis
